[Sets And Probability Common Core Algebra 2 Homework Answers](#)

Exercise #2: The spinner below is spun once and its outcome is noted. Let E be the event of getting an even, let P be the event of getting a prime, and let L be the event of getting a number less than 5. Find the following probabilities:

(a) The probability of getting an even, i.e. $P(E)$.

(b) The probability of getting an even given that the outcome was a prime number, i.e. $P(E | P)$

(c) The probability of getting an even given that the outcome was a number less than 5, i.e. $P(E | L)$.

(d) Which event does E depend on, P or L ? How can you tell? What is a reasonable test?

Page 1 cleared.
